

Wendy's gingerbread house template

(Please leave feedback/photos if you've used this template: it gets downloaded thousands of times per year but I never hear if it worked out!)

- Cut a door piece that is smaller than the hole for the door: the gingerbread will grow in the oven.
- You can change the hole on the back wall as there is no door hole to cut.
- Make spare doors and chimneys in case they burn, get dropped, or expand when cooked.
